

BMS College of Engineering

With Great Power Comes Great Complexity

If you doubt us, We challenge you to give it a try! By the end of this course, you will be able to run a Microservice based application on a Kubernetes Cluster.

An Initiative by DEPARTMENT OF ISE Hands-on Value-added Course on "Kubernetes"

You might have heard the name Kubernetes or K8s already and can't really imagine what it is, or you've already heard about it but still need a little more info.

What does this course do differently from the other courses?

Quite a lot! Most guides start with the simple stuff: Kubernetes concepts and and kubect commands. But here we will start from scratch, assuming you don't have any idea about what is k8s, How to Setup the Environment, application development, Microservices, and Docker containers, with hands on sessions.

In this course we assume that you know absolutely nothing about writing codes!

From 4th May, 2022

Mode: Blended

Registration Fee: Rs.300

K8s From Scratch

4 Week Course

No matter what your background is, as long as you're interested, this course is for you.

Kubernetes for Beginners

It's not easy for Google also!

Even Google, the inventor and biggest promoter of Kubernetes says "Despite 6 years of progress, Kubernetes is still incredibly complex"
